

# ACH Positive Pay

Our ACH Positive Pay service makes it easier to monitor your ACH debit activity online and provides additional protection from fraudulent entries, without the tedious task of reviewing every item.

## How it works:

ACH debits to your account are first compared to authorizations you previously established. Items matching the criteria you established will be released for payment. Any exception, or ACH debit without a prior authorization on file, will be available for your online review and decision.

## Features:

- Establish authorizations to allow one-time or future recurring ACH debits
- Receive email alerts when ACH debit entries have been received on your account without a pre-established authorization
- Review, modify or delete authorizations that have been previously placed
- Review ACH debit entries prior to posting; make decisions to pay or return fraudulent debit entries (No decision defaults to returning the transaction to the sender)
- Administer permissions for decision capabilities to other individuals in the organization via user-defined entitlements
- Access additional ACH information regarding the item presented for review – originator name, RTN and company ID, standard entry class, and effective date
- View reports displaying check items, ACH items or both

If you are unable to review items online and only have a few authorizations, you may enroll in ACH Debit Block and Filters to place a full block on your account and manually add authorizations as needed.

## Benefits of ACH Positive Pay:

**Improved control and security** enables you to make immediate pay/no pay decisions on potentially fraudulent items.

**Reduced costs**, increased efficiency, and reduced fraud exposure and potential losses associated with electronic payment fraud.
